

Green Packet Berhad

Green Packet Partners Beceem to Introduce New High-Performance WiMAX Dongles

Green Packet, a leading developer of next generation mobile broadband and networking solutions and Beceem Communications, a leading developer of Mobile WiMAX chips, are forming a strategic partnership to introduce a portfolio of high-performance WiMAX USB dongles for the global WiMAX market.

Steadfast in its commitment to enhance its products and services while providing better end-user experiences, Green Packet has based its UM350 USB dongle on Beceem's BCSM250 single chip solution. Beceem is a leading contributor to the rapid growth of the WiMAX ecosystem, and has set themselves as the enabler of high quality chipsets at very reasonable price points.

"We are committed to offering a USB modem portfolio that maximizes user performance at the most competitive price," said Kelvin Lee, Senior General Manager of Green Packet Berhad. "Our partnership with Beceem will see us further enhancing our range of products to deliver ease of use, mobility and low power consumption."

The collaboration will begin with Green Packet's 3.5GHz USB dongles, extending into the development for the 2.3GHz and 2.5GHz spectrum to meet Green Packet's client demand worldwide.

"Green Packet is fast emerging as one of the leading OEMs for wireless broadband products," said Babu Mandava, CEO of Beceem. "Having been chosen by Green Packet underscores the fact that performance of the product is an important ingredient of success in WiMAX, and we look forward to our close collaboration with Green Packet which has the global reach to deliver products anywhere."

In a show of strength, Green Packet will be demonstrating seamless mobility using its two top selling solutions; the UM350 USB dongle and Intouch Connection Management Platform (ICMP) on Worldmax's commercial 3.5GHz network at the WiMAX Forum Global Congress in Amsterdam (WFGC-Amsterdam). This showcase will demonstrate session persistence as well as illustrate uninterrupted connection and application usage as the user moves between WiMAX and WiFi. The WFGC-Amsterdam event takes place from 2 to 3 June 2009.

Green Packet's ICMP is the industry's leading intelligent connection management solution, offering operators an end-to-end solution designed to converge connection management, communication services and entertainment within a single client. It is designed to simplify and enrich the connectivity experience of users while giving operators the opportunity to increase ARPU (Average Revenue Per User).

Green Packet is uniquely differentiated in the international WiMAX space as the company not only innovates WiMAX products and solutions but has the capability to field test its innovation for customer relevance on one of the world largest LIVE network through Green Packet's subsidiary and WiMAX operator arm Packet One Networks (Malaysia) Sdn Bhd or "P1" in Malaysia. It is this end-to-end business model that sees both established industry players and new operators in emerging markets turn to Green Packet to enable shorter time to market traction and enhanced services which translates to increased ARPU and faster returns on investments.

Green Packet is fully committed to advancing the WiMAX business and technology globally, and is well on its way with regional offices and R&D centres in USA, China, and Malaysia; as well as offices in Singapore, Thailand, Bahrain, Taiwan,

and Australia.

About Green Packet

Green Packet Berhad was founded in the Silicon Valley and has offices in eight markets worldwide. In 2000, Green Packet established its R&D and marketing centre in strategically located Malaysia. Today, it is headquartered near Kuala Lumpur and listed on the Main Board of the Malaysian Bourse with over 630 employees. A leading developer of Next Generation Mobile Broadband and Networking Solutions, Green Packet's mission is to provide a seamless and unified platform for the delivery of user-centric multimedia communications and services regardless of the nature and availability of backbone infrastructures.

Green Packet has two key business pillars: Products & Solutions and Converged Communications Services. For more information, visit: <http://www.greenpacket.com>

About Beceem Communications

Beceem is the leading provider of mobile WiMAX semiconductors with proven over-the-air data speeds exceeding 30 Mbps. Beceem offers a number of single chip solutions optimized for mobile devices and CPE markets that are fully qualified against the WiMAX base stations from all major OEMs. <http://www.beceem.com>
