Intellexer Categorizer SDK: Semantic Software Solution From EffectiveSoft

EffectiveSoft developed a new solution – Intellexer Categorizer SDK which helps automatically to distribute documents into categories according to a documents' content.

The solution is based on the Linguistic Processor which allows to handle the information on the level of meaning. Categorizer SDK can be easily integrated into any Software Solution.

The main Categorizer feature is there is no need to form a difficult system of rules for categorization. It means a user should only choose the documents which will be set as etalons for this or that category. Then the process of categorization goes automatically. It based on the semantic comparison of the etalon documents and the documents for categorization.

But Intellexer Categorizer has other important features such as:

- An opportunity to create any catalogue structure
- Work with different file formats
- Automatic categorization of any amount of document
- Automatic updates of the catalogue structure after changing the set of the etalon documents
- Documents are ranged by relevancy (High relevant, low, irrelevant)

This solution is ideal for Enterprise content/knowledge management, Business information management, Intelligence department and Archives management.

EffectiveSoft gave a possibility to download Categorizer demo to see how it works. It is available at <http://categorizer.intellexer.com/downloads.html>. But also here is its online demo for those who just want to learn Categorizer principles of work, without any registration.

Everyone who are interested in Intellexer Categorizer SDK and want to try it contact our sales department to get a quote.
