New Version of Intellexer Spellchecker SDK Released by EffectiveSoft

EffectiveSoft released a new version Intellexer Spellchecker SDK – a library which provides spelling check capabilities for any application. The library may be linked to every Win32 project.

This new version preserves the features of the previous one – Intellexer Spellchecker SDK V 3.0.0.17 (English version) such as:

- Comprehensive built-in English dictionary
- High-quality spelling check results
- Spelling correction candidates with weights
- Adjustable parameters of the algorithm
- Customizable user dictionary
- Detailed documentation and examples
- Fully documented interfaces
- Support of all Windows programming languages

At the same time the new Spellchecker V 3.0.0.21(En+Ru version) is equipped with unique feature:

- Added multilanguage support (implemented the Russian)

Now the program supports the common English language (dictionary size: 311,000 wordforms, requires about 4 MB of RAM) and the Russian language (dictionary size: 744,722 wordforms, requires about 6 MB of RAM) depending on the chosen installation package.

The development library contains a common DLL interface and interfaces for C++ and .NET with corresponding documentation and examples (C++, C#, Delphi).
